BeaFlex

New thermoplastic elastomers production process

Componit intends to implement, in its production unit, a new production line of SBS/SEBS thermoplastic elastomers, replacing the current collection not in line with the company's growth objectives and business reality.

The implementation of this production line will make it possible to save energy as well as to increase the manufacturing process' efficiency and productivity, making it more competitive. With this project's implementation, Componit expects its Turnover to grow by about 200 % between 2014 and the post-project year.
